- Game Development
- Team work
- Adaptability

### EXPERIENCE

#### Software Engineer

2025 – Present

##### GMV

Java developer in the space sector working on the Galileo project. My role focuses on maintaining and improving the software used in ground control centers.

Applied **SOLID** programming principles to ensure modular and reusable solutions, including the use of design patterns to improve software functionality and scalability.

#### Software Developer

2023 – 2025

##### Capgemini

Full-Stack Developer responsible for the maintenance and evolution of web services, using Java and Angular technologies.

### PROJECTS

#### QuimiLab

2023-2024

Educational simulator aimed at Chemistry undergraduate students, developed in collaboration with Rey Juan Carlos University. My role in the project involved programming in **Unity**, developing scripts in C#, and managing the connection to an external database.
